
Diet x PE interaction genes and skeletal-muscle carry-over [PROVISIONAL: deposited counts, no length offset]
primary model
87 interaction genes, 23 muscle-tracking
with muscle covariate
16 interaction genes, 0 muscle-tracking
all genes
interaction FDR < 0.05
... and muscle-tracking
PE effect under MASH diet (shrunken log2FC)
PE effect under control diet (shrunken log2FC)
